\*All Registers Are White \*Return Air Registers Are Extra \*AIM Uses AIRMATE Registers

## WHY HAVE YOUR AIR DUCTS CLEANED?

With day-to-day movement and changes in outdoor environments, it is understandable that your home may have pollutants and allergens in the air. If family members begin to experience symptoms of colds, asthma, allergies or other respiratory illnesses it may be dirty air ducts that are the culprit. This increased concentration of dust in your ventilation systems can lead to the environment inside your home being up to 100 times more polluted than the outside environment.

AIM gets to work cleaning the entire system, not just vacuuming around the register and vents. Our crews use patented equipment to reach through the vents and right into the ductwork. No part of the system is left untouched, and all dust and grime is extracted and collected for disposal.

Now the air in your home is fresh, clean and pure - the way it should be!
